

# Slinfold Golf & Country Club

## PROJECT OVERVIEW:

1. Redevelop a poorly designed; drained and contoured golf driving range.
2. Modernise a 9 hole par 3 golf course.

## REASON FOR UPGRADE:

The driving range outfield was aesthetically poor to the point golfers were not making use of it. Its contouring also meant the ball collection operation in winter was a problem making it very costly.

The Par 3 course was flat and uninteresting and therefore not serving its purpose of getting new golfers into the game.

## CLIENT:

Country Club Group

## CLIENT OBJECTIVE:

To turn a problematic and loss making area of their business into something that would attract members and visitors and become an asset and profit centre.

## PROJECT LENGTH:

3 years from start to finish.

## THE PLANS:

The finished project will include the following...

- A completely re built outfield for the golf driving range, with target areas, and contouring to create free draining.
- A completely re built 9-hole Par 3 golf course. Greens built to USGA spec and Astroturf tees.

## PROJECT SIZE:

The project covers 30 acres and involves the importation of 200,000 m3 of environmentally approved soil.
